Hey guys! With the recently added Nikana Prime I thought I would go ahead and after that build I use! Nikana Prime Builds Guide WarframeSchool September 10, 2018 Leave a comment From late 2017 Nikana Prime sealed in Prime Vault, making it very difficult to get the various parts needed to build a large melee weapon. Nikana Prime, a melee weapon, is a sword that resembles a katana using Nikana's positions. It is a fast and deadly melee weapon that can cut enemies apart. It mainly deals damage to enemies. WEAPON CHARACTERISTICS. Nikana Prime is the main variant of Nikana, Tenno's old sword based on katana. Reminder: At the end of the day build however you feel it is right! It's just my view of guns! :) Fashions are next, and the rudimentary combos are here just for general placement. Use appropriate combos for different factions. Bloody Fever (Max) Fever Strike (Max) Shocking Touch (Max) Pressure Point (Max) Melted Impact (Max) Body Number (Max) Berserker (Max) Body Shatter (Max) Now if you absolutely need to use Life Strike you can take one of the elementals in order to put it in the assembly. Another Witch build similar is a replacement from Elementary for True Steel (GASP). This is usually not a good idea, but from my calculations they end up around the same dps factoring in the red crit damage, and again at the end of the day to build however you please! Have fun tenn! EDIT: Further calculations were made and I came up with these results. These numbers do not take into account any armor or other attributes of enemies. These numbers were calculated on paper, and I could have been wrong. But I write what came up with that actually the results have become in a bit more DPS on nikana prime. Assuming you have a 2.5x combo multiplier with the build you use above me. If you remove the molten impact and use the true steel on a 2.5x multiplier in 10 melee attacks you would have done 32063.48 damage on paper. But if you used a molten exposure on a 2.5x multiplier you would have done 29.381.6 damage on paper. Now ASSUMING you infact hit a crit or 164% crit chance you would do more damage. But if you get UNLUCKY you will do less. In the damage it goes up before you build your multiplier. Nikana Prime was to be replaced by Elementalist. Forged leather swords lost over the centuries, the reason being sharper than metal in any modern Nikana. Nikana Prime is the newer version of Nikana, acting as a direct upgrade above the Dragon of Nikana. It is also designed along with Saryn Prime and Spira Prime. These weapons now have the same Slash, Block, Dodge, and Parry, less effective against armor and shields. Comparisons: Nikana Prime's key and component drawings are derived from the following void relics.
